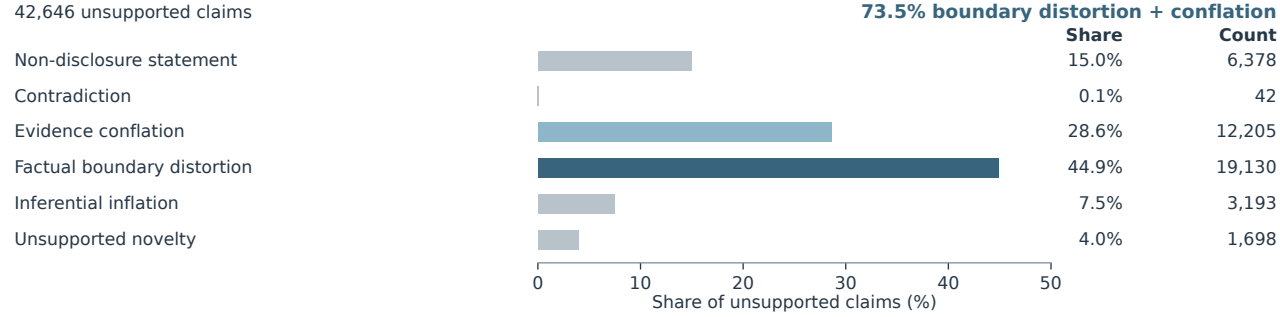
a Automated diagnosis composition



b Wärtsilä: historical evidence and the target reporting year

Supplied evidence · source year 2019

"Wärtsilä uses an online solution for supply chain risk identification, assessment, and monitoring."

Annual Report 2019, p. 132 · Evidence 7

Temporal carry-forward →

Extracted disclosure claim · target 2022

"Wärtsilä uses an online solution for supply-chain risk identification."

G1-2 · Supplier relationships

BACE diagnosis: Factual boundary distortion

Historical evidence does not establish discontinuation of the practice.

c ASML: source-row association challenges an automated contradiction

Extracted DC (target 2019): "ASML's Scope 1 footprint has historically been defined as emissions from purchased CO_2."

Original glossary rows · typeset transcription

ASML Integrated Report 2018, p. 209 (PDF p. 216)

CO_2 footprint – direct scope 1	Consists of the combustion of natural gas and purchased CO_2
CO_2 footprint – indirect scope 2	Calculated by multiplying electricity consumptions of the manufacturing locations by the local conversion factors

Text extraction →

Selected candidate evidence claim

Extracted from the flattened supplied card

"According to ASML's 2018 annual report, ASML's direct Scope 1 CO_2 footprint is calculated by multiplying electricity consumption at its manufacturing locations by local conversion factors."

BACE: Contradiction. Source check: electricity belongs to Scope 2.

The source challenges the rationale; it does not validate the full disclosure.
